

EXPLANATION OF DRILL

DRILL #1 → Argue in Order

The components of an argument are given in incorrect order, you must organize them in CWDI format

DRILL #2 → Fill in the Blank

3 of the CWDI blocks will be filled with information needed, you need to fill in the blank block

***Fake evidence is used**

Argue in Order

ARGUE IN ORDER

- A.** This raises people out of poverty
- B.** This will help the economy
- C.** Harvard University finds in 2020 that this would increase the GDP by 15%
- D.** Because small businesses invest into the local economy

ARGUE IN ORDER

- A.** Because it invests in green tech
- B.** The UN quantifies in 2019 that green tech creates 3x jobs as fossil fuels
- C.** We decrease unemployment-related deaths
- D.** This reduces unemployment

ARGUE IN ORDER

- A.** This will reduce climate change
- B.** We decrease costly damages from natural disasters
- C.** Companies will decrease their GHG emissions
- D.** The Brookings Institute reports in 2021 that this would cut GHG emissions by 40%

Fill in the Blank

FILL IN THE BLANK

C. We decrease Chinese aggression

W. Because China doesn't want an attack from the American military

D. The Department of Defense finds in 2021 that China will actively avoid potential confrontation with the US Navy.

What's the impact??

FILL IN THE BLANK

What's the claim??

W. Because people will avoid the fines associated with not voting.

D. Yale University tells us in 2022 that mandatory voting increases voter turnout by 30%.

I. America will become more representative of different views.

FILL IN THE BLANK

C. This will increase healthcare coverage.

W. Because more people can afford a public healthcare option than private healthcare.

What's the data??

- Can be fake data

I. People won't die from being uninsured.

FILL IN THE BLANK

C. This will increase experienced judges on the Supreme Court.

What's the warrant??

D. UPenn reports in 2022 that SCOTUS term limits would reduce the need to appoint young justices.

I. Decisions are based on the constitution rather than politics.

Using Evidence Strategically

GOOD WARRANTING

Does your evidence actually accomplish something?

Often, debaters just use evidence for the sake of using evidence.

ASK YOURSELF:

If I remove this source, does it fundamentally make my argument less believable?

i.e. The highlighted evidence isn't really doing anything.

C1: Agriculture Production

Worsening weather patterns as a result of our climate crisis have already put vulnerable agricultural sectors at stake from the bottom up.

- For instance, the Environmental Protection Agency wrote in 2016 that “...in 2010 and 2012, high nighttime temperatures affected corn yields across the U.S. Corn Belt”

If we don't do anything, switching to new crops won't be easy, either. The consequences are projected to be severe.

- Reuters explains in an article from 2020 that in order to maximize production, more than half of the United States will have to switch crops by 2070. Even if the agriculture sector effectively transitions, production losses are inevitable and at least 5 percent of U.S. farmland will be rendered completely unproductive by 2070.

It falls upon this chamber to make the responsible decision and invest in climate resilient agriculture before we suffer the brunt of the damage.

Do you need a source to say what you're saying?

Often, debaters preface an obvious **fact, example, or truism** with a citation.

- *i.e. If you say* "The Center for American Progress writes in June of 2022 that American fiscal policy ought to be responsible and sustainable,"
- *you might as well just say...* "American fiscal policy ought to be responsible and sustainable."

ASK YOURSELF:

If you take out the citation, does the statement become unbelievable?

Do you explain the cause?

Way too often, debaters do not explain the causal link between the bill, their warrant, and an impact! but this is exactly what evidence is useful for.

The New York Times writes on July, 28, 2021 that Nick is 78% a dummy head.

The New York Times writes on July, 28, 2021 that Nick is 78% a dummy head BECAUSE he can't tie his shoes.

According to NOAA's National Ocean Service last month, half of Miami is projected to become uninhabitable by the end of the century.

According to NOAA's National Ocean Service last month, half of Miami is projected to become uninhabitable by the end of the century BECAUSE sea levels will rise by about 1.5 meters.

ASK YOURSELF:

Does my evidence **explain WHY or HOW something is true**, instead of just saying it's true?

Drill: Let's workshop speech(es)!

Work With Your Tablemates

Let's hear 1-2 speeches from tablemates and check this rubric:

- Do you have robust **warranting**?
 - Do you have **quoted** evidence?
 - Do you have **unnecessary** evidence?
 - Do you **need** a source to back up this claim?
 - Do you explain **why** the source matters, or what it means?
-
- Are your arguments backed up by **causal analysis**?
